

Parts per million

200 PPM in layman's terms.

$$\frac{1,000,000}{1,000,000} = .01$$

$$\frac{10,000}{1,000,000} = .01$$

$$\frac{200}{1,000,000}$$

$$\frac{1,000,000}{200,000} = 5$$

2-10,000's equal 200 PPM.

$$\frac{200}{1,000,000} \div 2 = \frac{1}{5000} \text{ converted}$$

to lbs. 1 lb contaminate / 5000 lbs soil, or 1 lb / 2 1/2 Ton Soil.

200 PPM Converted to percentages

$$10,000 = 1\%$$

$$5,000 = 1/2\%$$

$$2,500 = 1/4\%$$

$$1,250 = 1/8\%$$

$$625 = 1/16\%$$

$$312\frac{1}{2} = 1/32\%$$

$$200 = 1/50\%$$

$$50 \overline{) 10,000} \quad 200$$

So DEC has used PPM to magnify the actual risk, when it's very miniscule.

200 PPM ARE 1/50 OF 1% OF 1,000,000 Contamination level per gram

## Suggested Action

Keep petition in your hands to support your actions.

Drop us, from any activity, as it will just complicate & delay the process.

Show that DDO2 is too small to cause any alarm to health issues in the Gilmore area or 1 lb/5000 lbs.

If DEQ won't agree there is insufficient risk to do a project, then a NEPA should be done, in which you would participate. Maybe show options or other alternatives to project.

Nearly all Gilmore property owners are adamantly opposed to any actions by DEQ.

18-mile Helicopter Stroud Creek

Whereas: The Department of Environmental Quality is contemplating establishing a Super Fund site at Gilmore Townsite to correct supposed exposure to lead and arsenic poisoning.

We the undersigned landowners of Gilmore petition the Department of Environmental Quality to withdraw their actions, as we feel the danger is insufficient to warrant this type of project.
